

## Add a new node (node-red-dashboard) in your Bluemix Node-Red environment

Estimated time: 30 minutes

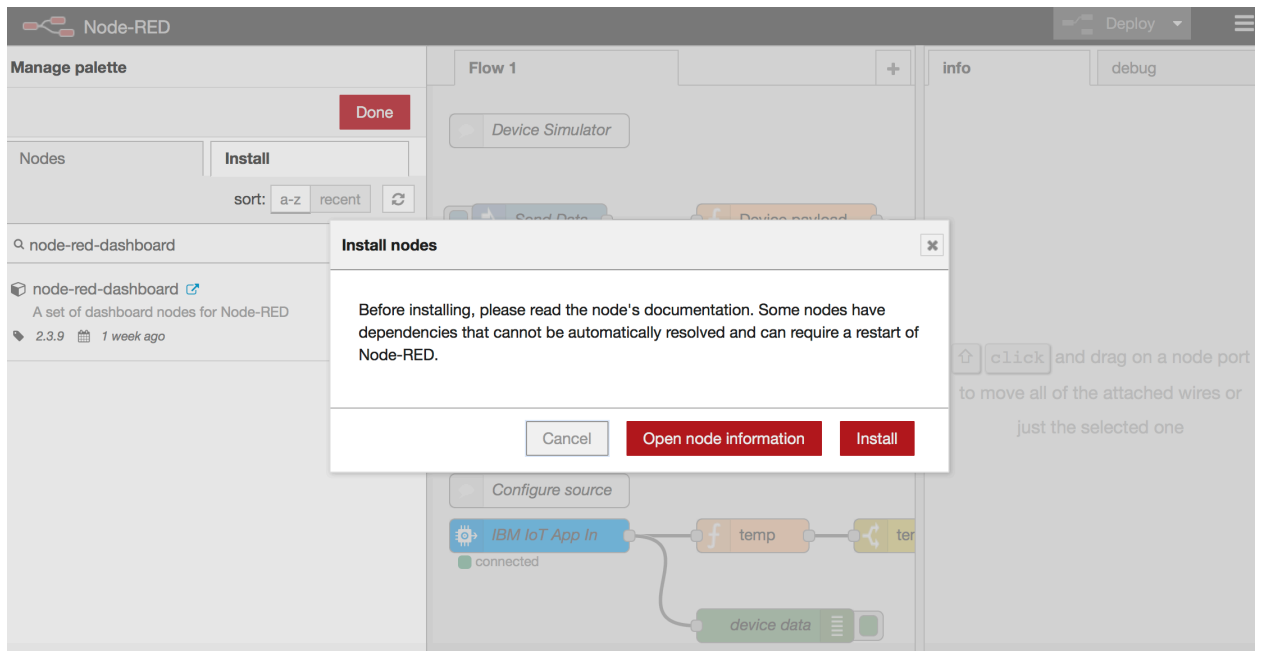

- Explore [all available nodes](#) and decide on your node(s) to add to the Node-Red environment on Bluemix.
- Go to your Node-Red editor.
- Click on the menu on top right.
- Click on manage palette

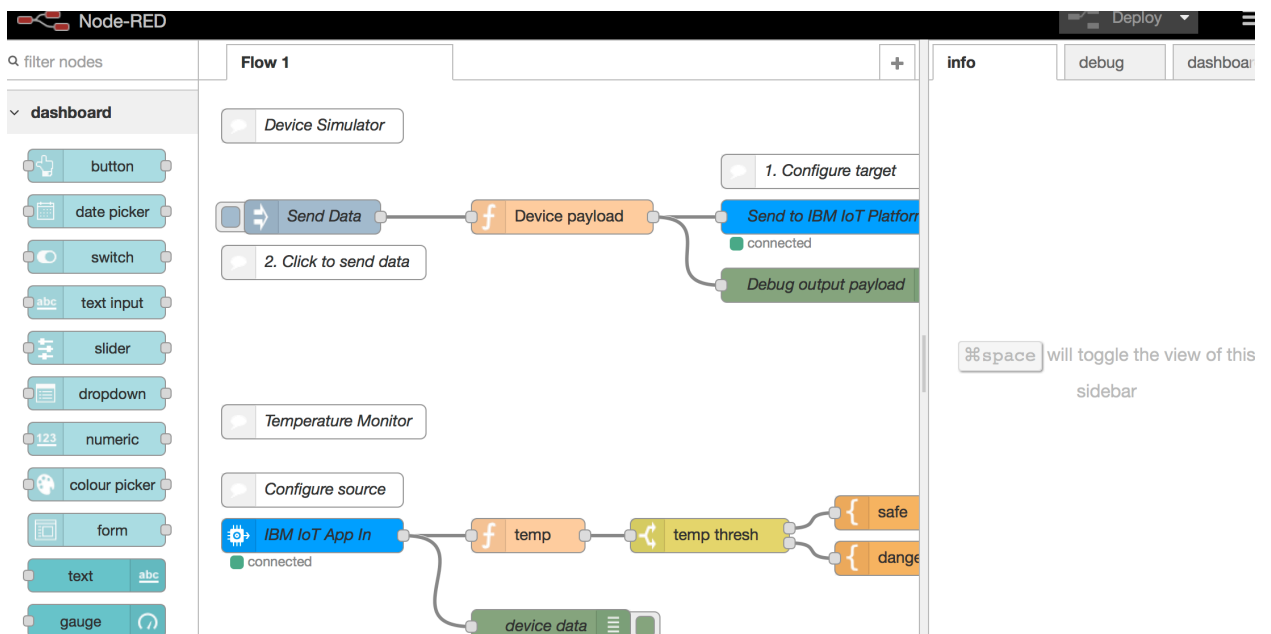

- Go to the “Install” tab
- Search for the node of your interest. For example, search for node-red-dashboard

- Click Install and Install again on the popup window and wait for the node to be installed.

- When done, you should see the new nodes under “dashboard” category on the left panel

- These nodes are now available for you to drag and drop and use in your flow.
- Follow the above steps and add the “node-red-contrib-find-my-iphone” node. This node will be used for a future lab to connect your iPhone to the Bluemix cloud.
